Abstract

With the continuous development of higher education, especially graduate education, how to cultivate high-level talents with innovative thinking and practical ability has become the core task of the current education reform. As an important educational innovation mode, the collaborative education mechanism emphasizes the integration and cooperation of all resources in the process of education, so as to maximize the realization of the educational goals. Under this mechanism, the role of graduate counselors has become more prominent. This paper will discuss the innovation of the working ideas of graduate counselors under the mechanism of collaborative education, and analyze how to improve the working effect through innovative thinking and promote the all-round development of graduate students. Specifically, the innovation of the counselors working ideas is mainly reflected in the following aspects: first, make precise efforts in the daily routine work to promote the innovation of management mode; second, take scientific measures in teaching practice to deepen the innovation of teaching mode; third, fully connect in the cooperation with the tutors to promote the innovation of cooperation mode.

Keywords

Collaborative education; graduate counselor; tutor.

1. Introduction

With the rapid development of higher education, especially the deepening of graduate education, how to cultivate high-level talents with innovative thinking and practical ability has become the key to the current education reform. As an important educational innovation mode, the collaborative education mechanism emphasizes the integration and cooperation of all resources in the process of education, so as to achieve the maximization of educational goals. Under this mechanism, the role of graduate counselors is becoming more and more important. This paper will discuss the innovation of the working ideas of graduate counselors under the collaborative education mechanism, and analyze how the counselors can improve their work effect through innovative thinking, so as to promote the comprehensive development of graduate students.

2. The connotation and background of the collaborative education mechanism

The mechanism of cooperative education refers to the joint participation and cooperation of schools, teachers, counselors, tutors and all sectors of society in the process of education, and realizes the comprehensive quality cultivation of students through information sharing, resource integration and complementary advantages. The core goal of the collaborative education mechanism is to promote the more efficient and comprehensive education work, and promote the personalized development of students innovation ability.

With the development of graduate education, especially the increase of the number of graduate students year by year, the traditional education mode has been difficult to meet the training needs of high-level talents. The cooperative education mechanism emphasizes multi-party cooperation, advocates the close contact and cooperation between teachers, tutors, counselors, students and school management departments, to form a joint force and promote the multi-dimensional progress of education.

3. Role orientation of graduate counselors

Graduate counselors are an indispensable part of the schools education system. They are not only responsible for the ideological and political education, daily management and psychological counseling of students, but also need to guide graduate students in scientific research and academic activities. Under the mechanism of collaborative education, the role positioning of graduate counselors is also constantly changing, from the traditional role of manager to the education guide, problem solver, resource coordinator and service supporter. Graduate counselors need to have comprehensive qualities in various aspects. In addition to certain management ability, they should also have strong communication skills, academic counseling ability, psychological counseling ability and collaborative work ability. This requires the counselors to flexibly respond to various situations in their work, and give full play to their role in coordination, service and support.

4. Innovation of the working ideas of graduate counselors

Under the cooperative education mechanism, the innovation of working ideas of graduate counselors is mainly reflected in the following aspects: first, the precise force in the daily routine work to promote the innovation of management mode; second, the scientific measures in teaching practice to deepen the innovation of teaching mode; third, the cooperation with the tutor to promote the innovation of cooperation mode.

4.1. Make precise efforts in daily routine work to promote the innovation of management methods

The management of graduate students is not only the management of students daily life, but also involves students ideological guidance, psychological guidance, scientific research guidance and career development planning and other aspects. In order to better adapt to the cooperative education mechanism, the management work of graduate counselors needs to be innovated.

4.1.1. Strengthen personalized management.

With the diversification of graduate students, students backgrounds, interests and needs are different, so counselors need to formulate personalized management plans according to the characteristics of each student. Through regular communication with students, understanding of students ideological trends, living conditions, academic progress, etc., to help students to make a reasonable academic planning, and provide corresponding support and guidance.

4.1.2. Improve mental health management.

Mental health problems are a common problem in the current graduate students. counselors need to innovate the way of mental health management, carry out regular mental health education and counseling activities, to help students relieve academic pressure, emotional distress and other problems. Group psychological counseling and psychological lectures can be conducted to improve students psychological quality and their ability to deal with difficulties.

4.1.3. Promote the organic combination of scientific research and management.

Under the mechanism of collaborative education, graduate research has become an important part of their growth. Counselors need to combine scientific research with daily management, pay attention to students' scientific research progress, and help students solve problems encountered in the process of scientific research. At the same time, counselors can also organize academic exchange activities to promote academic interaction and cooperation among students and improve their scientific research ability.

4.2. Take scientific measures in teaching practice and deepen the innovation of teaching methods

Under the traditional teaching mode, the learning of graduate students mainly depends on classroom teaching and the guidance of tutors, while under the mechanism of collaborative education, counselors should play a greater role in teaching and promote the innovation of graduate education.

4.2.1. Promote interdisciplinary integration and knowledge integration.

In today's increasingly complex scientific research and academic development, interdisciplinary research has become an important way to promote academic innovation. Counselors can organize academic salons, interdisciplinary lectures and other activities, to promote the exchange and collision of ideas between different disciplines, and to open up new academic horizons for students. This interdisciplinary communication not only helps graduate students to expand their knowledge, but also stimulates their innovative thinking.

4.2.2. Focus on the cultivation of practical ability.

Graduate students should not only have solid theoretical knowledge, but also have certain practical ability. In teaching work, counselors should pay attention to students' practical needs, organize academic practice activities and internship opportunities, and help students to apply theoretical knowledge to practical work. We can cooperate with enterprises, scientific research institutions and other units to provide more practice platforms and opportunities for students, and enhance students' social adaptability and professional competitiveness.

4.2.3. Strengthen the application of information technology.

With the continuous development of information technology, counselors can make use of modern information technology means, such as online learning platform and academic resource database, to promote the innovation of teaching work. Through the combination of online and offline methods, counselors can provide students with more flexible and rich learning resources, help students overcome time and space limitations, and improve their learning effects.

4.3. Comprehensive docking in the cooperation with mentors, and promote the innovation of cooperation mode

The graduate tutors are the core leaders of their academic growth, while the counselors are mainly responsible for the ideological and political education, psychological counseling and the cultivation of comprehensive quality. Under the mechanism of cooperative education, the cooperation between counselors and tutors is very important.

4.3.1. Strengthen communication and collaboration.

Counselors and tutors should maintain close communication and cooperation, and timely understand the progress of students in academic research, as well as the confusion and problems in the ideological and psychological aspects. The counselor can regularly give feedback on the status of the students and assist the tutor to develop academic guidance programs more in line with the students' needs. At the same time, the counselors can also obtain academic guidance from the tutors to provide more specific and effective help for the students.

4.3.2. Solve students problems together.

In the process of graduate student training, the problems faced by the students are not only in the academic aspects, but also may involve the psychological, emotional and other aspects. Counselors and tutors should work together to help students solve various problems. For example, when students face research bottlenecks, the counselor can provide psychological counseling for students, while the tutor can give guidance from an academic perspective. Through cooperation, we can better help students to overcome difficulties and successfully complete their studies.

4.3.3. Jointly promote students career development.

The career development of graduate students is an important part of education, and counselors and tutors should pay close attention to students career planning together. Counselors can organize career development lectures, internship opportunities and other activities to provide students with career development support. Tutors can provide more specific career guidance according to students professional direction and research interests to help students plan their career paths.

5. Epilogue

Under the mechanism of collaborative education, the work ideas of graduate counselors should keep pace with The Times and pay attention to innovation and multi-party cooperation. By making precise efforts in daily routine work, taking scientific measures in teaching practice, and making comprehensive docking in the cooperation with tutors, counselors can better serve the all-round development of graduate students and promote the cultivation of high-level talents. With the continuous innovation of educational concept, the work of graduate counselors will certainly face more challenges and opportunities. Through continuous exploration and innovation, counselors will be able to better adapt to the development requirements of the collaborative education mechanism, improve work efficiency and education quality, and provide strong support for the growth and development of students.
