Abstract

In recent years, the state has put rural revitalization in an important position of the national development strategy, emphasizing that rural revitalization must be realized in order to solve the problems of agriculture, rural areas and farmers and improve rural economic income. Under the rural revitalization strategy, in order to restore the overall vitality of villages and towns, we must give priority to the development of agricultural and rural areas. However, due to the restriction of the dual structure of urban and rural areas, the planning and construction of villages and towns are faced with many problems, such as the absence of the main body of village planning and construction management, the crisis of abandoning cultivated land for other purposes, poor living conditions and even destruction. This paper emphasizes practical village planning, pays attention to the construction of ecological civilization and the principle of construction and development according to local conditions, constructs a diversified development space, and provides effective assistance for the implementation of the strategy of rural revitalization, as well as the development of practical rural planning.

Keywords

Rural Revitalization; Planning; Integration; Practicability.

1. Give Full Play to the Main Role of Farmers in the Preparation, Examination, Approval and Implementation of Village Planning

The development of practical rural planning needs to fully respect the wishes of the broad masses of farmers. the reason is that farmers are the main body of rural revitalization and development. only by respecting the wishes of farmers can we fully implement the rural development strategy and promote the effective development of practical rural planning. To this end, it is necessary to comprehensively enhance farmers' rights to participate in rural planning, decision-making and the right to know. In the process of rural planning, it is necessary to correctly guide and organize peasant friends to carry out a series of rural planning work, and cultivate the comprehensive literacy of peasant friends as an important strategy for practical rural planning.

2. The Feasibility of Strengthening the Planning Work

In order to further highlight and guarantee the practicality of rural planning, we must comprehensively investigate and explore the natural environment and humanistic atmosphere of the countryside, combined with the characteristics and future development needs of the countryside. with the scientific guidance of the rural revitalization strategy, we will further

effectively design a scientific and reasonable rural practical planning and design scheme. In this process, we must ensure that the planning and design of practical villages can fully meet the life needs of the majority of farmers, and can actively improve the quality of life of farmers. In the process of practical rural planning, relevant designers and staff are needed to actively go to the grass-roots level to carry out good communication with the broad masses of villagers, comprehensively and fully understand and master the inner thoughts of the villagers in the new period, and carry out practical rural planning work effectively according to the inner needs of the villagers. Moreover, we should try our best to avoid the conflicting psychology caused by the villagers, actively communicate with the relevant leading cadres such as townships and village committees, and try our best to avoid the interference between the practical township work and the relevant enterprises in the village. This can not only protect the rural economic benefits, but also meet the basic needs of rural development, and comprehensively enhance the feasibility of rural planning.

3. The Concept of Innovative Planning

From the reality of the implementation and development of China's rural revitalization strategy, in the process of promoting practical rural planning, there are still many problems that have not been solved. Most of these problems reflect the poor consciousness of the staff and the backwardness of ideology. In order to achieve the effective solution of such problems, we must explore the specific measures for the implementation of the rural revitalization strategy from a macro point of view, and realize the implementation and promotion of practical rural planning by setting big goals and directions. After that, combined with the actual situation of the countryside, we should adopt the way of adjusting measures to local conditions to clarify the specific details of the planning. But also to avoid excessive pursuit of progress, while ignoring the reality of rural construction, it is necessary to comprehensively enhance the ideological awareness of the staff, through practical and effective ideological and political work, so that the relevant staff have a strong theoretical basis, so that they can have an excellent sense of responsibility, and be able to meet the practical needs of social development in the new period, and constantly learn modern theory and technology. On the other hand, we need relevant staff to recognize the characteristics and advantages of rural development. In the process of practical rural planning and construction, we must highlight the characteristic culture of rural construction, combined with the actual development of rural areas. Strive to create and plan a harmonious, beautiful and convenient rural home.

4. Guide Social Capital to Participate in Rural Revitalization

At the present stage, there is a relatively single way of investment in the implementation of the rural revitalization strategy in various regions of our country, and most of the funds mainly come from the financial allocation of the government. In this way, for the planning, construction and development of some rural areas, there is an obvious shortage of funds. And most of the funds are far from being able to meet the realistic strategic needs of rural revitalization. To this end, we should actively integrate social funds, form coordinated progress with industrial development, and help rural basic construction and rural social undertakings to form a good development. And in this process, we should also form an effective analysis of the unclear details of rural construction and development. Continue to explore innovative financing mechanisms, broaden the investment channels of rural construction funds, and attract social funds to carry out a series of rural infrastructure projects, so that rural revitalization can be effectively implemented, and build a better practical village.

5. Strengthen the Linkage between the Upper and Lower Levels, and Actively Make Good Use of the Technical Strength and Implementation Ability of Counties and Townships

In order to realize the effective promotion and good development of rural revitalization strategy and practical village planning, high-level planning teams should be introduced into the process of land space planning and rural industrial planning. to achieve the effective construction and good development of rural modern industry, so that the rural industrial chain and related rural planning can form a reasonable layout. At the same time, combined with the relevance of the industrial chain, as well as rural unique resources, clear the specific direction of rural economic development. And through the combination of a number of administrative villages to develop a coordinated development mechanism, so that the industrial agglomeration effect and planning synergy effect can be further strengthened. The relevant departments should also actively interact with the upper leadership departments, constantly report the actual situation of rural industrial development and the basic needs of industrial development to the higher departments, and after receiving the necessary guidance and relevant examination and approval, comprehensively form and effectively implement the rural revitalization strategy, which can better ensure the integration of practical rural planning intentions, and also enable spatial information to be accurately located.

6. Combine with the Rural Development Planning

Under the guidance of the strategy of rural revitalization, the development of practical rural planning must be fully based on the needs of rural economic development, combined with the long-term development of rural areas, to explore the goals and measures of practical rural long-term development. But also to ensure that the rural revitalization strategy can be fully implemented, through the following two aspects to carry out related work. First of all, combined with the basic needs of practical rural planning, we should explore relevant strategies to promote the development of rural industry, such as actively promoting the development of tourism industry, which can provide effective help for the sustained progress and benign development of rural economy; secondly, for the scientific and rational use of rural resources, in addition to rural cultural resources and environmental resources, we should also strive to develop agricultural economy. For example, the development of animal husbandry, aquaculture, and the application of scientific planting and cultivation techniques to promote the good growth of a series of high-yield, high-quality and cost-effective crops. Moreover, innovative management concepts should be used to help the broad masses of villagers shake off poverty and become rich. From the institutional point of view, the overall development goal of rural economic development must be clear, so that the practical countryside can be built smoothly.

7. Summary

The planning of the integrated development mechanism of rural revitalization regional integration refers to the promotion of mutual cooperation and development among rural revitalization regions through the formulation of a series of policies and measures. The planning of rural revitalization regional integrated development mechanism can promote the cooperation and development among rural revitalization regions and achieve the goal of win-win development.
